

**Education**

M.S., Wetland Biology, Southeastern Louisiana University, 2009  
B.S., Wildlife Biology, Southeastern Louisiana University, 2007

**Areas of Relevant Expertise**

Wildlife Management  
Wetland Delineation and Section 404 Permitting  
Threatened/Endangered Species Permitting

**Years of Experience**

With This Firm:        Since 2011  
With Other Firms:     7

**Relevant Experience  
Summary**

- Section 404/10 Permitting
- Threatened/Endangered Species Survey and Section 7/10(a) Permitting
- Wildlife Ecology
- Wetland Delineation
- Wildlife and Game Management
- Habitat Restoration

**Experience Summary**

Chris Carrell is a graduate of Southeastern Louisiana University's masters program in wetland biology. During his studies he participated in numerous projects encompassing every wetland type in Southeastern Louisiana, including the creation of a wetland that processed tertiary stage effluent from a wastewater facility. As a wildlife biologist with the US Fish and Wildlife Service, he worked extensively with threatened/endangered species including: golden-cheeked warbler, black-capped vireo, red-cockaded woodpecker, brown pelican, Louisiana black bear, and gopher tortoise. He was also involved with invasive species control, preparing section 7(c) biological investigations, and habitat assessments for threatened/endangered species. As a member of the Horizon's ecology staff, he hopes to continue working with threatened/ endangered species as well as perform wetland determinations and delineations, Phase I Environmental Site Assessments, and prepare Wildlife Management Plans for agriculture tax exemptions.
